

SONGBIRD PROVIDES THE NEWEST GENERATION OF SMART PHONES FROM NOKIA, HTC, MOTOROLA, AND PALM WITH AN EASIER TO USE, ON-THE-GO MEDIA EXPERIENCE

SAN FRANCISCO, CA — December 29, 2009— Songbird, a simple media solution to discover, play, and sync music, now supports the Nokia N900, HTC Hero, Motorola Droid, and the Palm Pre. Songbird also unveiled several new features and a redesigned website.

New features from Songbird make music discovery and management for mobile listening easier than ever. Songbird, an open media player, now includes Mass Storage (MSC) Device Support, enabling an even wider range of users to move and manage music on their devices in a seamless fashion. And while downloading and streaming are most critical to many, for users with large CD collections, Songbird now includes CD Ripping, which makes importing their favorite CDs fast, easy and straightforward.

The new Songbird software enables media management and syncing for several smart phones including the [HTC Hero](#) and the [Motorola Droid](#) – both based on Google’s Android – the [Nokia N900](#) and the [Palm Pre](#).

“Consumers who choose the power of the Nokia N900 will have this option for easily managing and listening to their music using Songbird’s media player,” said Rob Taylor, Director, Solutions & Forum, Nokia Americas.

Songbird enables consumers to transfer their collection of music to smart phones and MP3 players, find new music and purchase songs. Additional functionality, provided by Songbird partners, offers recommendations for new music based on what customers have been listening to recently, notifies listeners when their favorite artists are coming to town, and lets them buy tickets right from Songbird.

“The latest generation of smart phones are reshaping consumer expectations of the mobile experience and we are excited to offer a robust media platform for the hottest smart phones on the market,” said Jerrell Jimerson, CEO of Songbird. “As mobile phones become the center piece of a consumer’s media life, it’s great to be able to deliver a solution that dramatically improves the experience.”

The newly designed interface makes it simple to sync their collection of music to their favorite device. Songbird’s media platform for the PC, Mac, and Linux are available from its newly redesigned website at <http://www.getsongbird.com>.

ABOUT SONGBIRD

Headquartered in San Francisco, Songbird was founded in 2006 with the vision of delivering a free and open media player for people to find new music, listen to old favorites and experience a deeper connection to the music they love. Because Songbird is based on an open platform, it’s a strong solution for partners in web content, commerce, and search to provide their offerings to a wider audience.

Today, Songbird supports a variety of portable media players and smart phones, so people can enjoy their media on the go. Songbird is built by a group of designers and developers that have previously worked on Winamp, Netscape Navigator, and Mozilla Firefox.

Thousands of developers passionate about music, media, and open source have contributed to Songbird by writing code and creating new features that bring the best of the open media web to the newest generation of smart phones and media players. Try songbird now at <http://www.getsongbird.com>.
